

AMENDMENTS TO THE CLAIMS

In the Claims:

1. (Currently Amended) A method for ~~wirelessly~~ connecting a computer device to a server, the method comprising:
 - generating location data related to ~~the location of~~ the computer device;
 - wirelessly sending the location data to a phone number look-up device;
 - retrieving at least one phone number from the memory of the phone number look-up device, and based on the location data coupled to the phone number look-up device;
 - wirelessly sending the retrieved at least one phone number to the computer device; and
 - wirelessly connecting the computer device to a the server using the at least one phone number.
2. (Currently Amended) The method of claim 1, wherein generating location data is derived from a Global Positioning System (GPS) ~~the computer device is a telematics control unit.~~
3. (Currently Amended) The method of claim 1, wherein generating location data is derived from user input ~~the computer device is at least one of a laptop computer or personal data assistant.~~
4. (Currently Amended) The method of claim ~~1~~ 4, wherein user input ~~generating location data of the computer device~~ comprises:
 - recording location information as spoken by a user; and
 - generating location data by performing active speech recognition of the recorded location information.
5. (Original) A system for wirelessly connecting a computer device to a server, the system comprising:
 - a computer device comprising:
 - a location generator for generating data related to the location of the computer device;
 - a memory for storing server phone numbers based on location;

- a processor for retrieving a server phone number from the memory based on the generated location data, and for generating a request that includes the generated location data if no server phone number corresponds to the generated location data; and
- a communication device for wirelessly connecting the computer device to a server using the retrieved server phone number, and for wirelessly sending the generated request to a default phone number; and
- a phone number lookup device associated with the default phone number, the phone number look-up device comprises:
- memory for storing server phone numbers based on location;
 - a communication device for receiving the request from the computer device; and
 - a processor for retrieving a server phone number from the memory based on the received request,
- wherein the communication device sends the retrieved server phone number to the computer device, and the communication device of the computer device wirelessly connects to a server based on the sent server phone number.
6. (Original) The system of claim 5, wherein the computer device is a telematics control unit.
 7. (Original) The system of claim 5, wherein the computer device is at least one of a laptop computer or personal data assistant.
 8. (Original) The system of claim 5, wherein the location generator is an active speech recognition device for recording location information as spoken by a user, and generating location data by performing active speech recognition of the recorded location information.
